

PEST CONTROL

N-COUNTER 30.5 SC

IMIDACLOPRID 30.5% SC

ENCOUNTER TERMITE WITH N-COUNTER

N COUNTER is a non-repellent, odorless, soil applied residual termiticide for the protection and control of subterranean termites in and around domestic and commercial structures as pre and post construction treatment.

Recommended Uses For the protection of structures from subterranean termite damage and the control of subterranean termites around domestic and commercial structures as specified in the label.

ADVANTAGES : N COUNTER is non-repellant and non-detected by subterranean termites. Long residual life when applied as a barrier treatment. Water based, odorless formulation hence applicator and end user friendly. It is more safer than conventional organophosphate.

BENEFITS : Fewer call backs, resulting in satisfied homeowners. N-COUNTER is a product which creates non-repellent treated zone in the soil that function as **killing field** for termites

MODE OF ACTION : N-COUNTER unlike conventional termiticides convert the treated zone as killing field and kills when termite enter the treated zone and exposed to lethal doses. Termites exposed to N-COUNTER become dysfunctional immediately and stop feeding.

In addition termite transfers N-COUNTER by contact to nest mates who are not exposed to treated zone in the soil. This causes reduction in termite population and queen killing at Royal Chamber.

CHEMICAL GROUP : Imidacloprid.

GENERAL INSTRUCTIONS : Chemical treatment for termite control around existing buildings should be considered to be part of an integrated approach to reduce the risk of termite attack and should be conducted by LICENSED PEST CONTROL OPERATORS.

ACTIVITY SPECIALITY : N-COUNTER spreads well and remains in soil for sometimes as an effective termiticide. Since it is water soluble and having excellent lateral spread gives a well balanced distribution. N-COUNTER with time binds well with organic matter and due to this fact persist in soil for long time.

DOSAGE : For both pre and post construction, it is recommended to use N-COUNTER @ 0.1% a.i, concentration which is as follows

1 ltr N-COUNTER in 499 ltrs water to make 500 ltrs solution for use.

Re-Inspection : As with all chemical termiticides, regular inspections (at least annually) by a competent licensed Pest Manager are recommended as bridging and breaching of barriers can occur. The need for retreatment should be determined as a result of these inspections.

PRECAUTIONS : Residents and pets should not be allowed in a room being treated. Any spills should be cleaned up before leaving the room. Ensure all heating/air conditioning ducts, air vents, plumbing pipes, sewer lines, floor drains, heating pipes and electrical lines/conduits are known and identified before commencing any application of termiticide. Do not puncture or contaminate any of these. Avoid application around edible plants.

ALSO AVAILABLE ON DEMAND THE FOLLOWING

1. CHEMBAN-TC CHLORPYRIFOS 20% EC
CONVENTIONAL TERMITE TREATMENT

2. TERMI STOP RTU
FOR WOOD TREATMENT AGAINST TERMITE
