

RODENT CONTROL

NORDENT

A powerful rodenticide which is effective against rats and mice. Rodents are mammals and are often more intelligent than humans. They have very good sense of smell & touch. They have an acute sense of hearing, have nocturnal vision and highly developed taste. Rodents have incisors growing continuously throughout their life time. Hence to keep them under check they have the habit of gnawing doors, windows, cables, boxes, steel frames, hard surfaces etc. rodents destroy more than what they feed. Rodents are known to be the cause of diseases like Plague, Leptospirosis, Salmonellosis, Rat bite fever, Rabies etc.

NORDENT is an anticoagulant. It contains Bromadiolone as the active ingredient which is a second generation anticoagulant.

NORDENT acts by inhibiting blood clotting through Vitamin K antagonism, hence causing fatal bleeding.

Mode of Action :

NORDENT does not act as an instant poison, thereby eliminating the entire colony of rats. A single rat, after feeding on the first day dies on the 4th or 5th day depending on the intake. The internal bleeding due to the failure of producing vitamin K1 leads to loss of blood and hemorrhage leading to death.

Mode of Application :

NORDENT can be placed in the following areas after the inspection :

- ◆ Areas where the rats travel frequently.
- ◆ Places where you find the fecal deposits of rats.
- ◆ Places where you find the foot marks or urine contamination.
- ◆ Always in corners and not in the center of the room.
- ◆ The bait consumption has to be checked after the placement and if it is not consumed you may have to change the bait station or re-inspect for newer places.

NORDENT is available in two user friendly formulations :

NORDENT is a ready to use formulation. It comes in the form of wax blocks. You can just cut open the pack and place the blocks on a straight away after inspection. The advantage with the **NORDENT** is that you can place it in the inaccessible areas, inside the burroughs and any other place where rodent infestation is seen.

NORDENT contain as Bromadiolone 0.25% concentrate which is to be diluted with the bait material at the ratio of 1 part of **NORDENT** concentrate with 49 parts of food bait material. The prepared material is to be placed in the bait stations at suitable places after inspection. **NORDENT** concentrate is ideal for large area treatment , specific food adopted **NORDENT** control, field applications etc.

Toxicity and Antidote : **NORDENT** and **NORDENT** concentrate are safe to humans at the recommended does and method of application. **NORDENT** being a second generation anticoagulant does not have any risk of secondary poisoning and is safe for non targeted species. If there is any accidental Poisoning wash with plenty of soap and water. Vitamin K1 is the antidote which can be administered orally or intramuscularly.

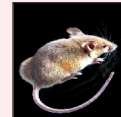

Pack Size : **NORDENT** : 100 gm X 200

NORDENT Concentrate : 500 gm tin X 20

NOTE : Information given above are the guidelines best to our knowledge. Recommendation made are without any guarantee since condition use are not in our Control.

Our Other Products :

1. **NOBAN - TC** - Chlorpyrifos 20% & 50% EC
2. **NOVIL** - Dichlorovos 76% EC
3. **N THION** - Malathion 50% EC
